THE BENEFITS OF VIRTUAL REALITY

Working Wirelessly with Remote Access

One of VR's greatest benefits is that its applications can be run from anywhere. Updated software can be added to a VR headset from any location with a Wi-Fi connection.

The VR headsets are extremely accessible. With the full capability of going wireless, training exercises no longer need to be run from a training room with a computer.

Reduced Cost

Working with VR has the potential for huge savings by removing the need to have people travel to onshore facilities.

Employees can be trained and / or assessed using a variety of different exercises that are uploaded directly to the VR headset instantly.

Realistic Scenarios

The freedom of VR allows users to experience situations that they couldn't necessarily experience in real life.

For example, users exposed to potential hazardous situations can be better prepared for such an event in the real world.

Incident and accidents can be recreated to aid understanding and enhance lessons learned.

WHAT CAN WE BUILD FOR YOU?

Emergency Scenarios

Fire / Gas Release Exercises
Production and Drilling Shutdown
Evacuation Response
Working at Height Rescue
Incident and Accident Response

Training & Assessments

Asset Induction
Crane / Deck / Rigging Operations
Drilling Tool Safe Use
Isolation Procedures
Equipment Start-up / Shutdown
Procedures
TAR Pre-planning
Construction Project Feasibility Study

Site Mapping

On and Offshore Facilities
Wind Turbines
Vessels & Subsea Operations
Dangerous Work Areas
New Work Sites
Crane Layouts / Load Clearances
